

**The information below is
the recommended care & application guide
as supplied by the magnetic sheet manufacturer**

CARE AND APPLICATION - PLEASE READ

Care and use of magnetic sheet used for vehicle signs

The use of magnetic sheet for vehicle signs may, in exceptional circumstances, result in damage to vehicle paintwork. The following advice is therefore given to minimise the risk of such damage occurring. Whilst extensive tests have not given rise to any incidences of damage to paintwork whilst following the advice given on the care sheet, we do not guarantee that there will not be an adverse reaction between the magnetic sheet and the vehicle paintwork.

Do not apply magnetic sheet to newly painted surfaces, especially non-factory applied finishes. Do clean and polish the application area of the vehicle with a high quality wax polish, ensuring that both the vehicle and magnet are clean and dry prior to placing the magnetic sheet on the paintwork.

Do ensure that the magnetic sign is removed regularly & the rear (magnetic side) cleaned with soapy water, not solvents, rinsed, dried and re-applied. Ideally this should be done daily but at least every two days. In very hot weather, it **MUST** be done daily.

Do ensure that all of the magnetic sheet is in contact with the vehicle (avoid heavily contoured areas) to ensure maximum performance and thus avoid movement of the sign whilst in use at motorway speeds.

Do not use on body panels containing plastic filler since this will drastically reduce the magnetic performance

When not in use, keep the magnetic sign flat – preferably store it on a flat steel surface to avoid the magnetic face attracting airborne ferrous dust.

There is no warranty expressed or implied against any loss of signs, damage to graphics, damage to the magnetic sheeting or damage to vehicle surfaces, as we have no control over how signs are cared for, altered, stored, applied and/or used, or to the type of surface the signs are applied to.

IMPORTANT INFORMATION FOR SIGNS WITH REFLECTIVE GRAPHICS

**For signs with reflective graphics, we recommend when not in use you store your signs indoors separately on a flat steel surface graphics facing up. Avoid bending or creasing the signs as this may damage the graphics & the magnetic sheeting, always apply and remove magnetics carefully. In warm or hot weather take extra care when removing and storing magnetic signs, creasing or bending the signs whilst warm will result in damage to the sheeting & graphics!
NEVER leave magnetic signs on your vehicle for long periods, REMOVE daily and store correctly.**
